

A. Define Your Product

1. What problem does your product website solve or address?

My website seeks to help the average alien plan a stress free vacation to different galaxies.

2. What is your product idea? How does your website support this idea and help solve the problem?

I want to make a website similar to trivago, or other travel/hotel booking websites. It has a search function with filter features to help the average alien plan the perfect get-away.

3. What type of website are you building? (i.e., e-commerce, brochure, portfolio, media, nonprofit, etc.)

business/e-commerce website.

4. What is your mission statement? Summarize what your product does, who it's for, and why it matters.

There's a common issue in every galaxy that no one seems to be addressing. When you wanna take a vacation, but don't want to stay in the same galaxy, what are you supposed to do? That's where we come in!

B. Profile Of Target Audience

Answer the following questions in your document:

1. Who is the primary audience that your product is trying to reach? Include the following details about your target audience:

- Demographics

- The website is open to anyone for viewing, but in order to pay, you have to be old enough to own some type of online credit system
- Open to all genders, races, and identities
- Visitors to the website live all around the universe!!!

- Socioeconomic Details

- I would say some of the websites suggestions would be more on the expensive side, so it would work best for luxury customers, but it is open to every demographic of wealth
- To fully use the website, users must have a concept of money and planetary geography

- Open to all family units and passengers
- Mostly business workers looking for personal or family vacations
- Any stressful shifts or long hours

○ Web Behavior

- Every now and then
- Usually a computer connected to universal communication devices

2. Create a chart with at least three fictional visitors from your target audience. This chart should include at least their name, sex, age, location, occupation, income and web use. You can create this chart manually or with AI tools like [ChatGPT](#).
3. Create a list of reasons why people would be coming to your site and assign the list of tasks to the fictional visitors you created. You can complete this step manually or with AI tools like [ChatGPT](#).

Name: †ωσσ ΔυΨΛ

Age: 1 glorp old

Website use: Needs a vacation BAD

Location: Staple system

Occupation: sales representative

Name: Lady something

Age: 1000000

Website Use: bachelorette trip with the gleebs!!

Location: keep 5

Occupation: Eye-dresser

Name: Rock

Age: 4

Website Use: secretly planning anniversary trip for his wife

Occupation: Lava Construction

Part III: Planning & Designing Your Product Website

Before you jump into building your site, it's essential to take a step back and plan with purpose. A beautiful website that doesn't meet its goals is a missed opportunity. Use this section to clarify your website's purpose, structure, and style so that your site is usable, accessible, and goal-driven.

A. Website Requirements

By addressing the questions below, you'll gain valuable insights into how to design a website that meets your goals and expectations.

1. Purpose & Goals

Answer the following questions in your document:

- What is the primary goal of your website (i.e., promote a service, sell a product, educate users, raise awareness, etc.)?

The primary goal of my website is to sell location spots to travelers of many demographics.

- What is the most important action you want users to take on your site (i.e., sign up, purchase, read articles, submit a form, etc.)?

Fully purchase their vacation.

2. Content & Features

Answer the following questions in your document:

- What content and features are essential to help users achieve their goals? List critical pages and features (i.e., About, Contact Form, Product Gallery, FAQs, Reviews, etc.).

- Account page

- Product gallery

- Vacation selection timeline

- Checkout list

- Credit recharge

- What will your homepage highlight? Think about the first impression and what visitors need to see right away.

A sign up/ login page, and then straight to the search bar and planning phase.

3. Look & Feel

Answer the following questions in your document:

- Do you have examples of websites that inspire your design? List 1–2 examples and what you like about them (i.e., layout, colors, interactivity, etc.).

- [trivago.com](https://www.trivago.com) for the layout of the website

- Kind of like motherboard from cyberchase

- How would you describe the overall style of your site (i.e., modern, bold, minimalist, playful, professional, etc.)?

- Chromecore and solarpunk type of style.

- Do you have preferences for color, fonts, or imagery? If not, what mood or personality do you want the site to convey?

- I really liked space themed games with mostly purples, greens, blues, and silvers. I really like neon colors as well.

B. Design & Prototyping

In this final section, you'll bring together your ideas and planning to shape the visual direction of your product website. You'll document your design choices and development strategy through diagrams, sketches, and visuals that guide your build process.

1. SDLC Approach & Timeline

In your answer document, outline how you plan to build your website using the SDLC. Your plan should include:

- The SDLC model you've chosen (Waterfall, Agile, Scrum, etc.).

- Waterfall Method

- A clear timeline of phases and milestones.

- Plan

- Design

- Data base setup

- Website build

- Beta test

- Release

- A visual representation of your timeline (e.g., Gantt chart, flowchart, or detailed bullet list). You may create this manually or with AI tools ([ChatGPT](#), [Gantt Chart AI](#)).

■ Plan

1. Fully write out every feature and the way a user should navigate the website

■ Design

1. Fully draw out the website and how each feature should react to each other.
2. It should be fully colored and detailed

■ Data base setup

1. Should include the locations and different categories that each location should be under
2. The filter system should use this database to suggest places under the categories that you choose and should link them together

■ Website build

1. This would be the coding process following the design and using the data base

■ Beta test

1. Having users test and record their personal navigation through this process and giving feedback

■ Release

1. Release to the public!

2. Original Logo

Design a logo for your product website that visually captures your brand identity. Your logo must include:

- The name of your product.

Interstellar Planning

- An image, icon, or design that represents your product.

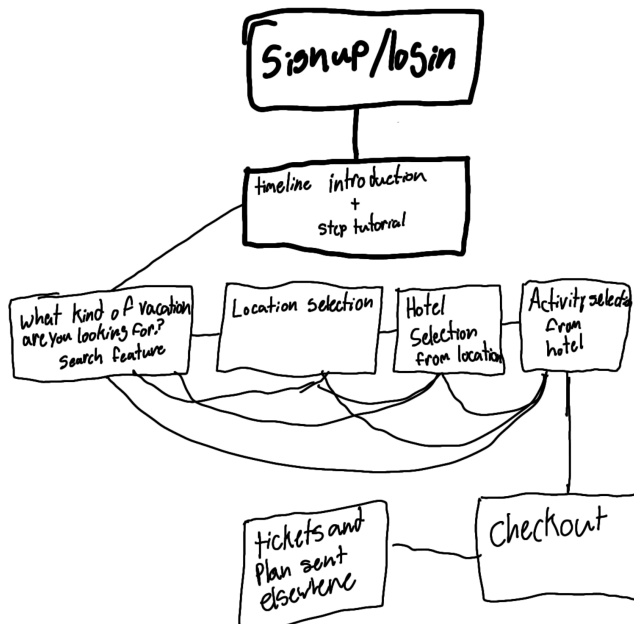

- A transparent background (export as PNG).

Use free tools like [Pixlr X](#) to create your logo. You can check out a [video tutorial](#) or [written tutorial](#) on how to create a logo in Pixlr X.

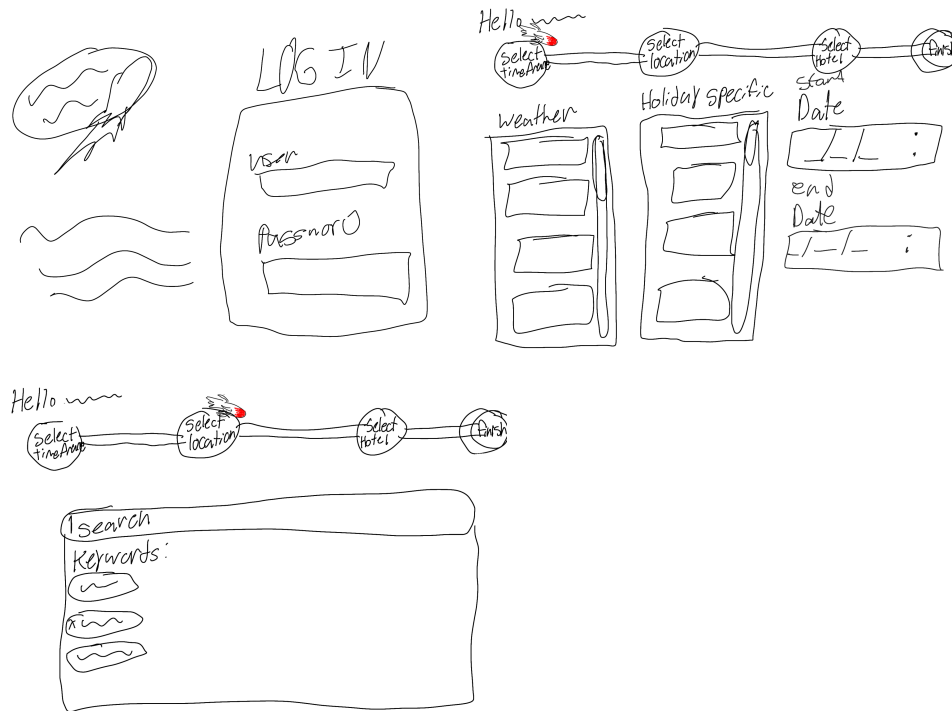

3. Site Map

Create a site map that shows how your site will be structured and how users will navigate between pages. Your site map should:

4. Wireframes

Design wireframes for your homepage and at least two other core pages. Your wireframes should:

You can create your wireframes manually on paper, using draw.io or with AI tools ([Uizard](https://uizard.io), [Figma with AI plugins](https://figma.com)).

5. Accessibility

In your answer document, explain how your product website will be made accessible from the start. Your plan should include:

- User should be able to access the websites recourses using only the keyboard
- Visual aids will definitely be provided
- Videos will also be provided
- Should be able to use the speech function for blind users on computers

You may create this manually or with AI tools ([ChatGPT](https://openai.com), [WAVE](https://wave.webaim.org), [Google Lighthouse](https://lighthouse.google.com)).
